ELSEVIER

Comput. Methods Appl. Mech. Engrg. 129 (1996) 413–416

Computer methods in applied mechanics and engineering

Subject index of Volume 129

Boundary element methods

A boundary element approach to the 2D potential flow problem around airfoils with cusped trailing edge, A. Carabineanu 213–219

A new approach for building bounded skew-upwind schemes, M. Darwish and F. Moukalled 221–233

Dynamics

On the solution of an inverse scattering problem in one-dimensional acoustic media, E.M. Fernandez-Berdaguer and J.E. Santos 91–105

Modified ODE-solver for vibration of tube-in-tube structures, Q. Wang 151–156

Elasticity

Superconvergent extraction of flux intensity factors and first derivatives from finite element solutions, B.A. Szabó and Z. Yosibash 349–370

Finite difference methods

On the solution of an inverse scattering problem in one-dimensional acoustic media, E.M. Fernandez-Berdaguer and J.E. Santos 91–105

Linearized Θ-methods: I. Ordinary differential equations, J.I. Ramos and C.M. García-López 255–269

Finite element and matrix methods

Analytical solutions for transient diffusion problems in infinite media, C. Zhao and G.P. Steven 29– 42

Coupled plastic-damaged model, B. Luccioni, S. Oller and R. Danesi 81– 89

A note on C^1-curved finite element, G. Qing and L. Li 107–114

Analysis of non-singular solutions of a mixed Navier–Stokes formulation, M. Farhloul and H. Manouzi 115–131

An adaptive Petrov–Galerkin formulation for the compressible Euler and Navier–Stokes equations, R.C. Almeida and A.C. Galeão 157–176

Unified and mixed formulation of the 8-node hexahedral elements by assumed strain method, Y.Y. Zhu and S. Cescotto 177–209

Numerical solution of spectral stochastic finite element systems, R.G. Ghanem and R.M. Kruger 289–303

Beam length and dynamic stiffness, Y.-H. Chen and J.-T. Sheu 311–318

Superconvergent extraction of flux intensity factors and first derivatives from finite element solutions, B.A. Szabó and Z. Yosibash 349–370

Sensitivity analysis for the dynamic response of thermoviscoplastic shells of revolution, M. Kulkarni and A.K. Noor 371–391

Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Fluid mechanics
Spectral collocation/domain decomposition method for viscoelastic flow simulations in model porous geometries, A. Souvaliotis and A.N. Beris 9– 28
Finite element method for free surface flow problems, M. Souli and J.P. Zolésio 43– 51
Analysis of non-singular solutions of a mixed Navier–Stokes formulation, M. Farhloul and H. Manouzi 115–131
An adaptive Petrov–Galerkin formulation for the compressible Euler and Navier–Stokes equations, R.C. Almeida and A.C. Galeão 157–176
A boundary element approach to the 2D potential flow problem around airfoils with cusped trailing edge, A. Carabineanu 213–219

Gas dynamics
An adaptive Petrov–Galerkin formulation for the compressible Euler and Navier–Stokes equations, R.C. Almeida and A.C. Galeão 157–176

Heat and diffusion
Analytical solutions for transient diffusion problems in infinite media, C. Zhao and G.P. Steven 29– 42

Incompressible and near incompressible media
Finite element method for free surface flow problems, M. Souli and J.P. Zolésio 43– 51
Unified and mixed formulation of the 8-node hexahedral elements by assumed strain method, Y.Y. Zhu and S. Cescotto 177–209
A boundary element approach to the 2D potential flow problem around airfoils with cusped trailing edge, A. Carabineanu 213–219

Modern computer architecture
Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Nonlinear mechanics
Finite element method for free surface flow problems, M. Souli and J.P. Zolésio 43– 51
Steady-state nonlinear heat transfer in stiffened composite plates and shells by an exactly integrated facet triangular element, J. Argyris and L. Tenek 53– 79
Coupled plastic-damaged model, B. Luccioni, S. Oller and R. Danesi 81– 89
A sensitivity analysis for the optimal design of metal-forming processes, S. Badrinarayanan and Z. Zabaras 319–348
Sensitivity analysis for the dynamic response of thermoviscoplastic shells of revolution, M. Kulkarni and A.K. Noor 371–391
Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Numerical solution procedures
Spectral collocation/domain decomposition method for viscoelastic flow simulations in model porous geometries, A. Souvaliotis and A.N. Beris 9– 28
Finite element method for free surface flow problems, M. Souli and J.P. Zolésio 43– 51
Coupled plastic-damaged model, B. Luccioni, S. Oller and R. Danesi 81– 89
An adaptive Petrov–Galerkin formulation for the compressible Euler and Navier–Stokes equations, R.C. Almeida and A.C. Galeão 157–176
Linearized Θ-methods: I. Ordinary differential equations, J.I. Ramos and C.M. García-López 255–269

Numerical solution of spectral stochastic finite element systems, R.G. Ghanem and R.M. Kruger 289–303
Approximate method for a two-dimensional parabolic free boundary problem, A. Kharab 305–310
Superconvergent extraction of flux intensity factors and first derivatives from finite element solutions, B.A. Szabó and Z. Yosibash 349–370
Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Optimization
Optimization of Space Station components using design code CometBoards, A.S. Gendy, S.N. Patnaik, D.A. Hopkins and L. Berke 133–149
A sensitivity analysis for the optimal design of metal-forming processes, S. Badrinarayanan and Z. Zabaras 319–348

Plasticity
Coupled plastic-damaged model, B. Luccioni, S. Oller and R. Danesi 81– 89
On the numerical treatment and analysis of finite deformation ductile single crystal plasticity, P. Steinmann and E. Stein 235–254
A sensitivity analysis for the optimal design of metal-forming processes, S. Badrinarayanan and Z. Zabaras 319–348

Shells and plates
Steady-state nonlinear heat transfer in stiffened composite plates and shells by an exactly integrated facet triangular element, J. Argyris and L. Tenek 53– 79
A note on C^1-curved finite element, G. Qing and L. Li 107–114
Coupling of two- and three-dimensional composite shell elements in linear and nonlinear applications, F. Gruttmann and W. Wagner 271–287
Sensitivity analysis for the dynamic response of thermoviscoplastic shells of revolution, M. Kulkarni and A.K. Noor 371–391
Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Solution of differential equations
On the solution of an inverse scattering problem in one-dimensional acoustic media, E.M. Fernandez-Berdaguer and J.E. Santos 91–105
Linearized Θ-methods: I. Ordinary differential equations, J.I. Ramos and C.M. García-López 255–269

Solutions of ordinary and partial differential equations
Analytical solutions for transient diffusion problems in infinite media, C. Zhao and G.P. Steven 29– 42
Linearized Θ-methods: I. Ordinary differential equations, J.I. Ramos and C.M. García-López 255–269

Stability in structural mechanics
Steady-state nonlinear heat transfer in stiffened composite plates and shells by an exactly integrated facet triangular element, J. Argyris and L. Tenek 53– 79

Stochastic processes
Detrimental or serendipitous effect of human error on reliability of structures, I. Elishakoff and A.M. Hasofer 1– 7
Numerical solution of spectral stochastic finite element systems, R.G. Ghanem and R.M. Kruger 289–303

Structural mechanics
Detrimental or serendipitous effect of human error on reliability of structures, I. Elishakoff and A.M. Hasofer 1– 7
Steady-state nonlinear heat transfer in stiffened composite plates and shells by an exactly integrated facet triangular element, J. Argyris and L. Tenek 53– 79
A note on C^1-curved finite element, G. Qing and L. Li 107–114
Sensitivity analysis for the dynamic response of thermoviscoplastic shells of revolution, M. Kulkarni and A.K. Noor 371–391
Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Subsonic flow
Analysis of non-singular solutions of a mixed Navier–Stokes formulation, M. Farhloul and H. Manouzi 115–131

Supersonic flow
An adaptive Petrov–Galerkin formulation for the compressible Euler and Navier–Stokes equations, R.C. Almeida and A.C. Galeão 157–176

Systems of linear and nonlinear simultaneous equations
Sensitivity analysis for large-deflection and postbuckling responses on distributed-memory computers, B.C. Watson and A.K. Noor 393–409

Thermal effects and thermodynamics
Sensitivity analysis for the dynamic response of thermoviscoplastic shells of revolution, M. Kulkarni and A.K. Noor 371–391

Viscoelastic and viscoplastic media
Spectral collocation/domain decomposition method for viscoelastic flow simulations in model porous geometries, A. Souvaliotis and A.N. Beris 9– 28
Sensitivity analysis for the dynamic response of thermoviscoplastic shells of revolution, M. Kulkarni and A.K. Noor 371–391

Viscous flow
Analysis of non-singular solutions of a mixed Navier–Stokes formulation, M. Farhloul and H. Manouzi 115–131
